

Have you gelled your hands?

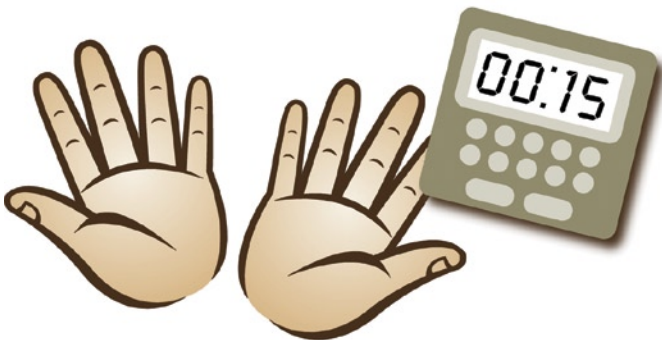

1

Apply one pump of Microshield™ hand gel to hands

2

Cover palms, back of hands, wrists, between fingers and under nails with solution

3

Allow hands to dry for 15 seconds

4

Your hands are now decontaminated

Do not use hand gel if hands are visibly soiled or after using the toilet; hands must be washed with soap and water at these times.

Hand gel should not be confused with soap product and should not be rinsed off once applied.
