

Congenital Heart Disease (2008) has been primarily designed as a self-directed learning package for registered nurses & midwives working within a Level 1 or Level 2 hospital who may be required to provide care for an infant with suspected congenital heart disease (CHD) whilst awaiting transfer to a higher level of care.

Neonatal nurses and Paediatric medical trainees working in tertiary centres and emergency transport services will also find the information within this package relevant to their practise.

The goal of this package is to facilitate the recognition of, and effective stabilization of, the infant with suspected CHD prior to transfer to a tertiary surgical centre.

Accompanying the learning package is the Royal Children's Hospital *Cardiac Handbook* by Catherine McDonald. The handbook contains descriptions and diagrams of structural CHD and discusses the surgical management of these conditions.
