

Can you help us?

We need your child's head.

**Want to get a FREE 3D
photograph of your child?**

Our state of the art 3D camera at The Royal Children's Hospital is helping to improve the care we provide our children, especially those needing measurements of their head size and shape.

We need to collect 3D images of children aged between 3 months and 18 years. If your child is in this age group and has not been diagnosed with a medical condition that affects their bones or growth, you can help.

Using photographic techniques, a 3D image will be captured of your child. All we need is a 30 minute visit to Educational Resource Centre. A copy of the image will be provided to you on CD to take home.

To participate, or for more information,
please call:
