ACKNOWLEDGEMENTS

PETS operates as an integral part of the Paediatric Intensive Care Unit of the Royal Children's Hospital Melbourne and is continuing the process of working towards amalgamation with the Newborn Emergency Transport Services (NETS) and the Perinatal Emergency Referral Service (PERS) as PIPER, the paediatric, infant and perinatal emergency referral service. We gratefully acknowledge the support of hospital management as well as of the Intensive Care Unit and the leadership of PIPER:

A/Prof Warwick Butt

Director, PICU

1. Introduction

The Victorian Paediatric Emergency Transport Service (PETS) retrieves critically ill children from hospitals throughout Victoria, Tasmania, and southern New South Wales for life-saving treatment to the Royal Children's Hospital and to Monash Medical Centre in Melbourne.

Operating out of the Paediatric Intensive Care Unit of the Royal Children's Hospital Melbourne, PETS brings the highly specialized, world-class resources of paediatric intensive care to critically ill children in Victoria and beyond providing safe, expert, emergency inter-hospital retrieval to a paediatric intensive care unit.

An equally vital part of PETS activity is the provision of specialist telephone advice to doctors, nurses, and ambulance personnel on the resuscitation of severely ill children thus making a unique resource available to healthcare workers throughout all of Victoria.

PETS is available 24 hours a day for advice and for retrieval of critically ill children in Victoria, Tasmania, and Southern New South Wales.

The period spanning the financial year 2012/2013 continued to be one of sustained high activity in paediatric retrieval. PETS handled 1021 referred cases and transport 469 patients.

2. History of Paediatric Emergency Transport in Victoria, Australia

Victoria has an area of 227,600 square km (87,884 square miles, roughly the size of the United Kingdom) and a population of 5.4 million, of whom 4 million live in greater Melbourne. 1.2 million of the 5 million are children (< 17years). Victorian PETS covers all of Victoria, southern New South Wales and northern Tasmania. The total population of this area is about 6 million (approx. 1.5 million children), living within 600 km of the base of operations. On occasion, PETS may also retrieve children from other paediatric ICUs in Australia for treatment available only at the RCH Melbourne.

Tertiary paediatric services in Victoria are located at the Royal Children's Hospital (RCH) and at Monash Medical Centre (MMC), both in Melbourne. Large general hospitals are located in regional cities and in central and suburban Melbourne. Many of these have paediatric departments and paediatric wards, with senior and junior paediatric medical staff, but not tertiary paediatric services. Smaller towns around the state usually lack specialist paediatric facilities; hospitals in these towns are staffed by general practitioners.

In 1976, a Neonatal Emergency Transport Service (NETS), based at the Royal Women's Hospital, began transporting ill newborn babies from hospitals around Victoria to tertiary neonatal intensive care units in the Royal Women's, Royal Children's, Mercy Maternity and Queen Victoria Hospitals in Melbourne, immediately reducing mortality and morbidity rates in Victorian newborns.

A paediatric emergency transport service, based at the Paediatric Intensive Care Unit of the Royal Children's Hospital, Melbourne, subsequently began operations in 1979, retrieving 46 patients in that year.

In 2012/2013, PETS received over 1021 phone referrals and retrieved more than 469 critically ill children.

3. PETS Team

PETS is staffed by the Paediatric Intensive Care Unit (PICU) of the Royal Children's Hospital Melbourne. This allows clinical advice and treatment during retrieval to be given by experienced and highly specialised teams. PICU thus comes to the child before the child can be moved to the PICU.

Organisation

PETS clinical operations are overseen by a medical director and a senior nurse clinician. They are supported by the PETS administrator. Service development and amalgamation with NETS and PETS are continuing under the leadership of the Director of PIPER, the Paediatric, Infant and Perinatal Emergency Referral service.

Transport staff

All retrievals are performed by a PICU doctor and a PETS nurse or by a PICU doctor and a paramedic. Medical staff are either experienced registrars (>4 years training in paediatrics, intensive care, anaesthesia or emergency medicine) with extra training in retrieval medicine or, in some highly complex retrievals such as transport on extracorporeal life-support (ECMO), they are senior ICU specialists from the RCH PICU.

PETS nurses are very experienced nursing staff with a strong background in looking after critically ill children as well as in retrieval nursing. They have undertaken a 1-year post-graduate specialist course in PICU nursing, attended a PETS Workshop, Air Ambulance Orientation, and completed a Competency Package. Many nurses have also completed the Introduction to Aeromedical Retrieval Course through Monash University and the Advanced Paediatric Life Support (APLS) Course.

4. Outreach Education

Victoria

The successful and sought-after PETS Outreach Education programme, organised by the PETS senior nurse clinician, continued in 2012/13. The programme is available to hospitals throughout Victoria, Tasmania and southern New South Wales.

In 2012/13, 19 full day seminars were conducted at the following hospitals: Sandringham, Orbost, Hamilton, John Fawkner (x3), Bendigo, The Royal Children's (x2), Goulburn Valley, Maryborough, Geelong, Northpark Private (x2), HATS (x3), Warrnambool, and East Melbourne Surgical Day Hospital.

PETS have also provided separate education sessions to Monash University Paediatric Nursing Course and Critical Care Nursing Course, The Royal Children's Deteriorating Child Workshops, Paediatric Nursing Course, and Paediatric Intensive Care Nursing Course.

PETS nurses have been involved in Trauma Outreach Seminars which in 2012/13 were conducted in Warragul and Ballarat. The PETS Medical Director (clinical) connected with junior and senior medical staff in the Victorian regions through presentations and seminars given in Warrnambool and Colac.

Regularly recurring education events include the PETS orientation and workshops for new PICU registrars and PICU nurses conducted each February and August. This also involves orientation to Air Ambulance, including tutorials and training sessions at Essendon airport.

Australia and International

PETS expertise and perspectives have also been in demand beyond Victoria's borders. PETS staff presented at the 14th Asian Pacific Congress of Pediatrics & 4th Asian Pacific Congress of Pediatric Nursing in Malaysia and gave talks and lectures in the Northern Territory as well as in Cambodia and Myanmar. In August 2012, at the request of the Hong Kong Health Authority, PETS conducted a 5-day training program for the nascent paediatric retrieval system in the territory.

Service Development

PETS continued to develop its operating procedures, working closely with the Newborn Emergency Transport Service, trialling and introducing a new newborn/paediatric triage guideline, conducting a checklist quality initiative and streamlining data collection.

5. ECLS Retrievals

Transport of critically ill children on extracorporeal life-support (ECLS) - "heart-lung machines" - is a challenging undertaking of extreme complexity and only performed by a few selected centres worldwide. The Victorian Paediatric Emergency Transport Service in cooperation with the RCH PICU and the RCH Department of Cardiac Surgery, have been able to offer this service to eligible patients in Victoria and throughout Australia. PETS is the only paediatric emergency retrieval service in Australia routinely offering ECMO capability.

A PETS ECMO team consists of a senior PETS nurse and a senior PETS doctor, a paediatric cardiac surgeon and a paediatric cardiac perfusionist. They travel to critically ill children, place or retrieve them on to mobile extracorporeal life support equipment and retrieve them the RCH PICU. ECMO transports are resource intensive and require a high level of medical, nursing and logistic expertise. The median retrieval time for an ECMO case is approximately 9 hours, compared to a median retrieval time of 2.7 hours for all other retrievals.

In 2012/13, two children were transported on ECLS and retrieved from The Children's Hospital at Westmead (NSW) and Monash Medical Centre (VIC). Patient diagnoses were acute rejection following cardiac transplant and ARDS. Both patients survived the retrieval to the Royal Children's Hospital and one survived to discharge from the Royal Children's Hospital.

In total, 37 patients have been retrieved by PETS on ECLS since 2000.

6. PETS Activity

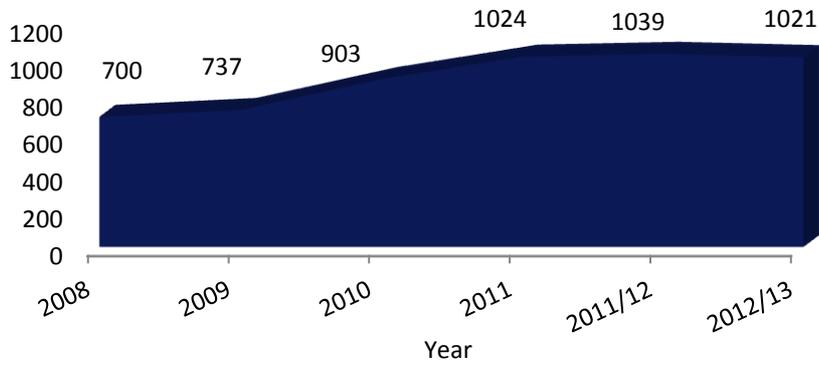

In 2012/13, PETS received 1021 referrals and retrieved 469 patients.

PETS activity - referral and retrieval trends

	2008	2009	2010	2011	2011/12	2012/13

PETS Patient Disposition – Trends

11. Conclusion

PETS delivers a crucial and highly specialised service to the children of Victoria and beyond. Giving clinicians throughout the state ready access to the expertise of PICU specialists at the Royal Children's Hospital and taking the skills, knowledge and resources of paediatric intensive care to critically ill paediatric patients, PETS makes a unique contribution to the healthcare of some of Victoria's sickest children.

Demand for PETS continued to be very high throughout 2012/13 with over a thousand referrals to the service. PETS continues to address the challenges of high demand and advancing paediatric retrieval medicine through improved procedures and through developing efficiencies in the process of working towards amalgamation with NETS and PERS.

Melbourne, July 2013
