# How to set up humidity in an incubator

1. Collect the sterile humidity chamber (A) and the heater component (B)

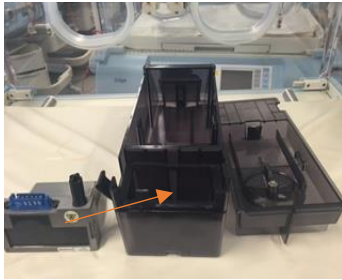

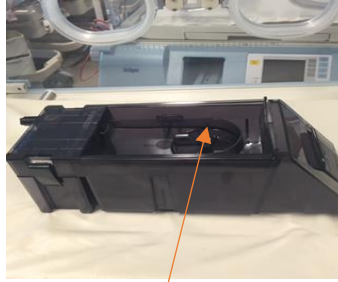

A

B

2. Assemble the unit together

Heater unit fits into here              sterile water goes into here

3. Place the assembled unit into the incubator

Slide unit into space until secure

4. Turn on humidity by pressing humidity button (A) and then ON (B), dial in desired humidity (C)

A

B

C

When humidity is no longer needed the plastic humidity chamber is sent to CSSD, take care removing the heater unit as it may still by hot- this is not sent to CSSD, it is processed by the ward PSA's
